Art Unit: 2652

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 26, 38, 37, 45 and 46, drawn to housing shield attenuating a field and having a material with a relative permeability, classified in class 360, subclass 97.02.
 - II. Claims 10, 29-30 and 48-50, drawn to a housing attenuating a field, classified in class 360, subclass 97.02.
 - III. Claims 16-24, drawn to a housing having a material with a relative permeability, classified in class 360, subclass 97.02.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination has housing shield portions formed from material having a relative permeability of at least approximately 100,000. The subcombination has separate utility such as providing an attenuation of field of at least 25 dB that at least partially shields the storage surface from an external magnetic filed that is applied in a direction that is substantially perpendicular to the storage surface.
- 3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require

the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination has housing shield portions having an attenuation of field of at least approximately 50 dB. The subcombination has separate utility such as providing a housing shield being formed from material having a relative permeability of at least approximately 50,000.

- 4. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as providing an attenuation of field of at least 25 dB that at least partially shields the storage surface from an external magnetic filed that is applied in a direction that is substantially perpendicular to the storage surface. See MPEP § 806.05(d).
- 5. Because these inventions are distinct for the reasons given above and the search required for Groups I and II is not required for Group III; the search required for Groups II and III is not required for Group I; and the search required for Groups I and III is not required for Group II restriction for examination purposes as indicated is proper.

- 6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David D. Davis whose telephone number is (703) 308-1503. The examiner can normally be reached on Mon., Tues., Thurs. and Fri. between 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoa T. Nguyen can be reached on (703) 305-9687. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.
